Summary

Results-driven Java Full Stack Developer with 8+ years of experience designing, developing, and optimizing scalable enterprise applications across B2B retail, financial transaction processing, banking, and Master Data Management (MDM). Proficient in Java, Spring Boot, Microservices, RESTful APIs, Angular, TypeScript, C/C++, Node.js, Apache Kafka, SQL, and Redis, with expertise in event-driven architectures, performance optimization, and distributed systems. Experienced in AWS, Docker, Kubernetes, Jenkins, Azure DevOps, CI/CD, and production observability using Grafana. Skilled in AI-assisted development using GitHub Copilot, Spec-Driven Development (SDD), automated testing, root-cause analysis (RCA), and Agile/Scrum delivery.

Skills

- **Programming Languages:** Java (8/11/17), Python, C, C++, C#, JavaScript, TypeScript, SQL, Groovy, Kotlin, Go.
- **Backend & Frameworks:** Core Java, Spring Framework, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, JDBC, Spring WebFlux, Spring Batch, Node.js, Express.js, Microservices, RESTful APIs, gRPC, WebSockets, Serverless Applications.
- **Frontend & Visualization:** Angular, React.js, Redux, HTML5, CSS3, JavaScript, TypeScript, Bootstrap, Angular Material, RxJS, D3.js, GraphQL, A/B Testing.
- **Databases & Messaging:** Oracle, PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Apache Kafka, JMS, RabbitMQ, Stream Processing, SQL Query Optimization, Indexing, Database Sharding, Transaction Management.
- **Cloud Computing & DevOps:** AWS (EC2, EKS, S3, Lambda, DynamoDB, CloudWatch, X-Ray, CodeDeploy, CloudFormation), Cloud-Native Applications, Serverless Computing, Docker, Kubernetes, Jenkins, Azure DevOps, Maven, Gradle, Git, GitHub, Bitbucket, SVN, CI/CD Pipelines, Infrastructure as Code (IaC), Canary Deployments, Rollback Strategies.
- **Testing, Observability & Reliability:** JUnit, Mockito, Selenium, Playwright, Playwright MCP, JMeter, Locust, Postman, Grafana, New Relic APM, AWS CloudWatch, AWS X-Ray, Distributed Tracing, Application Performance Monitoring (APM), Centralized Logging, Metrics, Traces, Log Analysis, Root Cause Analysis (RCA), Performance Testing, Latency Optimization, Fault Tolerance, Idempotency, Incident Management, SLA Monitoring.
- **AI-Assisted Development & Agentic AI:** GitHub Copilot, Claude (Anthropic), ChatGPT (OpenAI), Model Context Protocol (MCP), MCP Servers, AI Agents, Agentic AI Workflows, Spec-Driven Development (SDD), AI-Assisted Code Review, Debugging, Test Generation, Jira Analysis, Agile Standup Preparation, Sanitized Log Analysis, Technical Documentation.
- **Architecture & Engineering Practices:** Monolithic Architecture, Microservices, MVC, Event-Driven Architecture, Distributed Systems, High-Throughput/Low-Latency Design, Scalability, SOLID Principles, TDD, BDD, Agile/Scrum, SDLC, Waterfall, Pair Programming, Code Reviews, Refactoring, Swagger/OpenAPI, Mentoring.

Experience

Full Stack Developer Engineer **04/2026 – Present**
Quadrant Technologies USA

- Designed and developed Java and Spring Boot microservices for B2B retailer order management, supporting order creation, validation, product catalog integration, inventory availability, and distribution workflows across enterprise systems.
- Built and integrated RESTful APIs to manage retailer orders, product information, inventory allocation, and fulfillment status, enabling seamless communication between Angular applications and backend services.
- Implemented Apache Kafka-based event-driven messaging for order placement, inventory allocation, fulfillment processing, and shipment-status synchronization with downstream warehouse and distribution systems.
- Developed real-time order tracking and notification functionality using Kafka and WebSockets, providing timely order confirmations, fulfillment updates, and shipment-status information.
- Optimized SQL queries and Redis caching for product catalog, inventory-reference, and order-history data to improve API responsiveness and reduce unnecessary database requests.
- Developed reusable Angular and TypeScript components for retailer order placement, catalog search, order tracking, and distribution dashboards, improving frontend consistency and usability.
- Containerized Spring Boot microservices using Docker and Kubernetes, and enhanced Jenkins and Azure DevOps CI/CD pipelines to automate builds, testing, deployments, and release management.
- Applied Spec-Driven Development (SDD) using structured requirements and acceptance criteria, leveraging IntelliJ IDEA and GitHub Copilot for AI-assisted Java development, code refactoring, debugging, and test generation while supporting applications deployed on AWS EC2 and S3.

Full Stack Java Developer **02/2020 – 02/2026**
Everi Holdings USA

- Engineered high-performance, multithreaded C++ transaction-processing modules using Microsoft Visual Studio, supporting casino financial operations involving credit/debit card transactions, Marker Issuance, Marker Redemption, and Front Money, across systems processing over 1 million daily transactions with 98.99% application uptime.
- Developed reusable Angular components and services for casino financial management and compliance applications, supporting patron account information, payment transactions, marker tracking, and Front Money workflows while improving frontend development efficiency by 38%.
- Modernized a legacy Java Swing desktop application by refactoring financial business logic and integrating Spring Boot RESTful APIs for transaction validation, marker operations, and patron account management, reducing maintenance overhead by 18%.
- Developed real-time financial transaction synchronization using Apache Kafka and Node.js, exchanging patron data, payment statuses, marker activity, and Front Money updates across connected casino systems, reducing reported data inconsistencies by 95%.
- Containerized Java backend services using Docker, standardizing development and testing environments and reducing new developer setup time from 2 days to 4 hours.
- Used Microsoft Visual Studio with GitHub Copilot for AI-assisted C++ development, code refactoring, and testing; developed JUnit and Mockito unit and integration tests for Java financial transaction services, achieving 85% code coverage for new features.
- Collaborated with cross-functional teams through Agile/Scrum, supporting production troubleshooting and delivery of 6 major releases, contributing to a 20% improvement in project velocity over three years.

Full Stack Developer **07/2018 – 01/2020**
Unilog Content solutions USA

- Engineered responsive Angular and JavaScript web interfaces for enterprise Master Data Management (MDM), streamlining catalog administration and contributing to a 10% increase in user session duration.
- Developed scalable Node.js and Express.js backend services for master-record creation, validation, processing, and synchronization, supporting millions of enterprise master-data records.
- Enhanced C-based Windows processing modules with reusable data-validation logic to improve master-record processing efficiency and legacy application reliability.
- Integrated RESTful APIs and Apache Kafka to exchange master-data updates and publish catalog-change events to downstream enterprise systems, supporting synchronous data access and asynchronous synchronization.
- Developed and optimized PostgreSQL SQL queries and stored procedures for master records, entity relationships, and data-quality validation, improving data integrity and retrieval efficiency.
- Collaborated with cross-functional teams through Agile/Scrum, translating business requirements into technical solutions and delivering enhancements across web and Windows-based applications.
- Performed code reviews, debugging, root-cause analysis (RCA), and defect resolution across Angular, Node.js, PostgreSQL, Kafka, and C modules to improve application stability and maintainability.

Java Developer **02/2017 – 07/2018**

Insight Business Machine USA

- Designed and developed Java and Spring Boot microservices for internet banking transactions, loan repayments, and payment collection workflows, contributing to a 20% improvement in transaction throughput.
- Integrated banking and loan collection services using Apache Kafka, enabling asynchronous payment processing, repayment tracking, transaction reconciliation, and downstream reporting.
- Developed Kafka and WebSocket-based notifications for payment confirmations, account balance updates, and loan collection statuses, contributing to an 18% reduction in support tickets.
- Optimized SQL queries and Redis caching for transaction history, account dashboards, and loan information, improving API response times and reducing repeated database requests.
- Modernized legacy banking application deployment using Docker and Kubernetes, streamlining containerized services and contributing to a 30% reduction in server provisioning costs.
- Developed reusable Angular and TypeScript components for internet banking, loan account management, and payment collection interfaces, improving UI consistency, accessibility, and integration with backend REST APIs.
- Supported AWS EC2 and S3 migration, application performance monitoring using Grafana dashboards, and production incident troubleshooting through log analysis, root-cause analysis, and defect resolution, helping support 35% year-over-year transaction-data growth.

Education

Bachelor of Technology – Electronics and Communication Engineering **2016**

Dr.M.G.R. Educational and Research Institute Chennai, India
